

eircom instant infrastructure

Your ICT infrastructure costs less and achieves more with virtualisation. Pay for what you need, scale on demand, and see real performance improvements.

eircom instant infrastructure at a glance

- Create a fully bespoke, rapidly scalable infrastructure
- Save on energy, purchase and maintenance costs
- Free up your vital IT teams from hardware tasks
- Platform refresh managed by eircom
- Risk-controlled migration process
- World-class datacenter environment for your mission critical systems
- No capex required
- Protect your organisation with powerful disaster recovery and storage solutions
- Increase service levels for your end-users

Achieve a more dynamic enterprise with virtualisation

Your ICT infrastructure may cost more than needed unless it is precisely sized for your requirements. eircom instant infrastructure is a dynamic computing platform that lets you specify exactly what you need: processing, storage, backup and networking. Adjust capacity anytime, without spending capital or burdening your IT teams. Cutting the ties to hardware lets you gain the freedom to become more responsive: project work and other temporary requirements no longer force you to buy permanent new systems.

Using virtualisation technologies from Cisco and VMware, we help you reduce server sprawl, increase utilisation levels and deliver much higher availability, so your investment works harder. Our complete service includes consultancy, risk-managed transition, and ongoing management delivered on our enabling network.

Best of breed virtualisation platform

The eircom instant infrastructure platform is housed in our data centres and is based on best-of-breed components from VMware, Cisco, EMC and Dell. You choose the specification of your virtual servers, backup and storage devices, so your infrastructure is tailored to your needs and applications.

Risk-controlled migration for your existing hardware

Our dedicated professional services team consults with you to design and deliver a full virtualisation roadmap. We program manage your migration into our data centres, ensuring your end-users are not impacted by changeover.

The ideal environment for your systems

Most companies choose to host their virtualised ICT in our first class data centres, offering advanced power, cooling and security; but if preferred, our experts can build your virtual environment on-site.

Why choose eircom instant infrastructure?

- End-to-end virtualisation service encompassing consultancy, risk-managed transition, platform management and enabling network
- Ireland's most extensive network of data centres delivers geographic diversity for your business continuity
- Proven skillset in virtualisation and managed ICT services, delivered for our customers and eircom's own ICT-intensive organisation
- A carrier neutral service - we deliver and manage your virtualised platform regardless of carrier
- As part of our €1 billion three-year investment in our network, we are working to deliver a suite of Next Generation IP & Ethernet services over our Next Generation Network (NGN). We are committed to delivering the fast, reliable network access that underpins the effectiveness of virtual ICT services.

What can eircom do for you?

We're devoting all our resources to help Irish organisations drive greater benefits from ICT. We're combining the unrivalled speed and reach of our network with powerful new virtualisation technologies that can transform the cost-effectiveness and performance of your infrastructure.

Better business continuity

eircom instant infrastructure facilitates real-time failover offering you unprecedented resilience if disaster strikes. You benefit from additional business assurance because your data is distributed across our network of data centres for the highest levels of availability.

Storage you can rely on

eircom virtual storage delivers more robust, more flexible storage than individual, single site SANs can offer. This rapidly scalable service delivers high availability to you business, thanks to dual redundant EMC Clarion platforms across diversely connected data centres.

Flexible options for disaster recovery

Your data is replicated in real time, backed up to a combination of disk and tape depending on your preferences. Real-time data streaming over the secure eircom network removes the need to transfer tapes.

ICT management and refresh for your peace of mind

Reduce the pressure on your in-house teams by leveraging our skilled staff to manage your platform on an ongoing basis. We continue to invest in the underlying platform, upgrading and refreshing as new components become available, so you can focus on core business without worrying about platform maintenance and updates.
